

CLEARPOINT®

water separators designed for maximum efficiency

CLEARPOINT® Water Separators

Performance

CLEARPOINT separators have superior performance and retention rates, even at partial flows, as low as 30% and as high as 150%.

Energy Efficiency

The water separator insert design was engineered specifically to provide ultra-low differential pressure throughout the entire range in combination with the curved inlet.

Housing Quality

A flow optimized, anodized, extruded aluminum housing with double-threaded head guarantees filter reliability and longevity.

Connection Size

Large connection sizes to flow ratio makes it easy to fit the separator to your compressor without oversizing.

Space Savings

Easily combine CLEARPOINT separators and filters together using our modular design feature that can be installed without any additional fittings or pipe.

How it Works

1. The compressed air flows into the inlet, which has been designed to work with many different types of connections.
2. A special internal turbine insert makes the compressed air rotate with high velocity, directed outward, forcing the condensate into the separator wall where it flows downward.
3. CLEARPOINT® water separator filter housings are made of salt water resistant aluminum and, in addition, are fully anodized and their outside is powder coated, to avoid corrosion.
4. The innovative rectifier leads the separated compressed air to the outlet and keeps flow losses to a minimum.
5. A large area void prevents the entrainment of condensate. More than 60% of condensate will accumulate, and is reliably drained with either a float drain or zero air loss BEKOMAT®.
6. A rising pipe prevents particle transfer to the upward flowing, rotational compressed air stream that has already been treated.
7. The fully treated compressed air that is now free of fluids and condensate flows downstream to other inline components or the point-of-use.

YouTube

CLEARPOINT® Water Separators

In-line water separators are typically used at after coolers and refrigeration dryers in order to remove bulk liquid that is present in the compressed air pipework as a result of condensate being formed. All compressed air systems create some level of condensate through the basic function of compression. Poor water or condensate management can result in process contamination, component failure, and high differential pressure. All of which can be very costly when compared to the cost of removal.

How it Works

1. Select the product or products that you wish to cover with the extended warranty.
2. Simply add 8% to the net price of each product or call your sales representative if you need help calculating your final net price.
3. Include this information as a line item with your purchase order or purchase the warranty extension up to 18-months post-sale.

What we need from you: It's not much. In fact, if you are purchasing the Cover3More extended warranty with a new equipment purchase, all you have to do is include a line item on your order indicating which items you wish you cover, and we will take care of the rest. If you happen to be adding coverage to a product you've already taken delivery of, then all we need is the company name and contact information of the original purchaser, the product model number of the product to be covered, serial number, and original purchase order number or BEKO Technologies invoice number, and we will apply coverage appropriately. **Please feel free to contact us at +1 (800) 235-6797 to get started.**

All maintenance procedures, including filter element changes, must be carried out in accordance with the manual in order to maintain any warranty.

Cover3More Extended Warranty Program

■ Compare

We give you more: In addition to a robust, standard 2-year warranty on BEKO Technologies products, we offer our customers the option of extending the standard warranty even further with the **Cover3More** program – a low cost, all-encompassing, and simple warranty extension program.

- › Extends the standard factory warranty for an additional 3-years
- › May be purchased at any time up to 18-months post-sale
- › No hassle and easy to calculate without any hidden costs

Secure your future with a minimal investment. The **Cover3More** extended warranty program from BEKO Technologies ensures that your investment is covered for a total of 5-years at a nominal cost.

- › 2-year standard warranty covers parts and labor
- › 3-year extended warranty covers parts only, no parts restrictions
- › Significantly reduces your risk of having unexpected costs

Reliability you can count on: With the Cover3More extended warranty program, BEKO Technologies not only lengthens the standard warranty period by 3-years from the installation date, but also draws on the company's vast compressed air industry experience to quickly resolve any product problems you may experience in the least disruptive way possible, thereby keeping downtime to an absolute minimum. Should a repair be required, it will be handled by qualified, authorized personnel, and only original parts will be used.

What's in the fine print: The optional 36-month warranty extension (i.e. Cover3More) is a limited extended warranty that covers parts only from months 25-60.

However, all of the aforementioned installation, performance, and quality requirements must still be met in order to maintain extended warranty coverage. Failure to do so will render all warranties null and void.

The limited extended warranty coverage may be purchased and applied to any of the BEKO Technologies product lines included in the scope of the Cover3More extended warranty program from the original date of purchase from BEKO Technologies to 18-months thereafter.

Extended warranty coverage may not be purchased during the final 6-months of the standard warranty coverage, which are months 19-24 from the date of shipment or at BEKO Technologies' discretion, the date of installation.

The purchase price of the Cover3More limited extended warranty is not prorated and the current published purchase price is always applied.

Should the extended warranty coverage be purchased post-delivery or post-sale, then the serial number of all products to which the warranty shall be extended must be provided to BEKO Technologies at the time of purchase of the extended warranty.
